

## *iLite*<sup>™</sup> IL-12 Assay Ready Cells

(REF: BM4012)

### Description

*iLite*<sup>™</sup> IL-12 Assay Ready Cells are a genetically engineered reporter gene cell line (DT-40, ATCC#CRL-2111) responsive to Interleukin-12 by specific and proportional expression of Firefly Luciferase. Normalization of cell counts and serum matrix effects is obtained by a second reporter gene, a Renilla Luciferase reporter gene construct, under the control of a constitutive promoter.

### Content

>250 µL of *iLite*<sup>™</sup> Assay Ready Cells suspended in RPMI 1640 with 20% heat inactivated fetal bovine serum (FBS), mixed 1:1 with cryoprotective medium from Lonza (Cat. No 12-132A).

### Receipt and storage

Upon receipt confirm that adequate dry-ice is present and the cells are frozen. Immediately transfer to -80°C storage. Cells are stored at -80°C (**do not store at any other temperature**) and are stable as supplied until the expiry date shown. Cells should be used within 30 min of thawing.

### Background

Interleukin 12 (IL-12) is a 70 kDa cytokine produced principally by macrophages, neutrophils and dendritic cells in response to stimulation by antigen. IL-12 is a T cell-stimulating factor, playing a critical role in the regulation of T-helper 1 cell responses. IL-12 is composed of two subunits, p35 and p40, covalently linked by a single disulfide bond. The p40 subunit, which binds to the receptor chain IL-12Rβ1, is shared with another heterodimeric cytokine, IL-23. However, the two cytokines exert distinct non-redundant biological functions (1). Therapeutic agents targeting both IL-12 and IL-23 cytokines are currently used to treat psoriasis and psoriatic arthritis, and related agents are in clinical testing for a variety of inflammatory disorders (2).

### Application

The *iLite*<sup>™</sup> IL-12 Assay Ready Cells can be used for the quantification IL-12 or p40 inhibitor activity, or neutralizing antibody response against such inhibitors in human serum.

- Quantification of IL-12 inhibitor activity (E-214-GB)
- Determination of neutralizing antibodies against IL-12 inhibitors (E-215-GB)

	Lot number		Temperature limitation
	Catalogue number		Biohazard
	Use by		Manufacturer

### Precautions

- For research use only. This product is intended for professional laboratory research use only. The data and results originating from using the product, should not be used either in diagnostic procedures or in human therapeutic applications.

- *iLite*<sup>™</sup> IL-12 Assay Ready Cells are a stable transfected cell line of avian origin classified as a Class 1 Genetically Modified Microorganism. They should be handled in accordance with EU regulations (2009/41/EC) and disposed of in a licensed contained-use facility in accordance with these regulations. When used in accordance with the manufacturer's product specification, the requirements of EC Directive 2009/41/EC on the contained-use of genetically modified microorganisms are deemed to have been met.

- Residues of chemicals and preparations generally considered as biohazardous waste, and should be inactivated prior to disposal by autoclaving or using bleach. All such materials should be disposed of in accordance with established safety procedures.

### Propriety information

In accepting delivery of *iLite*<sup>™</sup> Assay Ready Cells the recipient agrees not to sub-culture these cells, attempt to sub-culture them or to give them to a third party, and only to use them directly in assays. Biomonitor *iLite*<sup>™</sup> cell-based products are covered by patents which is the property of Euro Diagnostica AB and any attempt to reproduce the delivered *iLite*<sup>™</sup> Assay Ready Cells is an infringement of these patents.
